U. S. DEPARTMENT OF AGRICULTURE
BUREAU OF HOME ECONOMICS, BUREAU OF AGRICULTURAL
ENGINEERING, EXTENSION SERVICE, AND OFFICE OF THE
SECRETARY COOPERATING

FOREWORD TO PRELIMINARY STATE TABLES

The Farm Housing Survey was made during the months of January and February, 1934, in 352 counties of 46 States. The information was obtained in house-to-house visits by women enumerators under the direct supervision of the State Extension Services, and tabulated locally by hand. Nationally, the project was administered by the Bureau of Home Economics, with the cooperation of the Extension Service, the Bureau of Agricultural Engineering and the Office of the Secretary of Agriculture.

Careful consideration was given to the selecting of the enumerators and clerks. Among them were home-economics, college or high school graduates, teachers, home-demonstration workers or club members, welfare workers, graduate nurses and other intellectually qualified rural women--all more or less familiar with farm-housing conditions.

The schedule used provided for a complete picture of the farm dwelling with space for more than 300 answers to questions concerning items found, their condition, and the needs. The Bureau of Home Economics sent instructions to each State office covering the outline of procedure and the methods for filling the schedules, including definitions of the various items to be checked.

We do not assume that this resulted in perfect uniformity throughout the country, since the human element is ever present in appraisals. Local supervisors interpreted these instructions in the way they thought most applicable to each section. For example, in judging between "good," "fair," and "poor," certain counties took the occupant's opinion, others the enumerator's, and still others a combination of both. However, extensive editing in the county and State offices, and a final careful editing in the Washington office have resulted in greatly reducing discrepancies and arriving at a degree of uniformity that enables us to present these data in a series of tables that are dependable. This assurance is substantiated by various comparisons with the Federal Farm Census of 1930.

All editing was done with reference to individual schedules or the complete tabulation of individual schedules. Faulty or incomplete schedules, and schedules for vacant houses were eliminated. The percentage of error in the field tabulations was determined by re-tabulating samples of data in each State from the original schedules. Counties showing an incidence of error above three per cent were discarded. Most of the counties showed an incidence of error of less than one per cent.

The age of the house refers to the original structure, which is, in most cases, the main part of the house. Similarly, under "kind of house," the type of construction of the main part of the house was enumerated.

ASTOR LENOX AND TILDEN FOUNDATIONS

REPORT OF THE BOARD OF TRUSTEES

The first object of the Board of Trustees was to secure the preservation of the books and manuscripts of the Library, and to see that they were properly stored and protected from fire, theft, and other dangers. The Board has succeeded in this, and the books and manuscripts are now in the best of preservation.

The second object of the Board was to secure the acquisition of new books and manuscripts, and to see that they were properly stored and protected from fire, theft, and other dangers. The Board has succeeded in this, and the books and manuscripts are now in the best of preservation.

The third object of the Board was to secure the publication of new books and manuscripts, and to see that they were properly stored and protected from fire, theft, and other dangers. The Board has succeeded in this, and the books and manuscripts are now in the best of preservation.

The fourth object of the Board was to secure the preservation of the books and manuscripts of the Library, and to see that they were properly stored and protected from fire, theft, and other dangers. The Board has succeeded in this, and the books and manuscripts are now in the best of preservation.

The fifth object of the Board was to secure the acquisition of new books and manuscripts, and to see that they were properly stored and protected from fire, theft, and other dangers. The Board has succeeded in this, and the books and manuscripts are now in the best of preservation.

The sixth object of the Board was to secure the publication of new books and manuscripts, and to see that they were properly stored and protected from fire, theft, and other dangers. The Board has succeeded in this, and the books and manuscripts are now in the best of preservation.

In Table II, Condition of House, the reports do not for all items tally with the number of houses surveyed. Whether the item did not exist, or did exist and was not reported, cannot be determined from the schedules or tabulation sheets. However, we have reason to assume that in most cases it is non-existent. Many houses have no screens; and some have no chimneys, merely using an extended stovepipe. Obviously there would be no report on exterior paint for unpainted houses. No stairs are reported for one-story houses.

The rooms counted in determining the size of the house were: living room, dining room, bedroom, kitchen, sewing room, work room, play room, furnace room, storage room, and recreation room. The average number of unused rooms, bedrooms, and closets was determined on the basis of the total number of houses surveyed in each county, as indices of conditions in the whole county. "Regular occupants" were people who had resided in the house within the three months preceding enumeration or who anticipated remaining during the next three months. "Piped gas" was defined as natural, manufactured or compressed tank gas. "Power line" was defined as central station service. Power washing machines include machines operated by gas engines, electric motors, or other mechanical power.

The data on financing in Table VII are presented as submitted, with the comment that many intangible factors influenced the replies, social, racial, and economic. A number of persons in each county refused to answer "yes" or "no" to the question regarding their willingness to borrow money for construction, repairs, and improvements, and not all who expressed willingness to borrow gave the amount desired.

Although an attempt was made to survey a representative ten-percent sample of the farm houses in each State, the percentages based on the results should not be applied to other groups in the State without careful study and research to determine the representativeness of the sample obtained. The data are presented in this form to facilitate interpretation of the findings of the counties that were surveyed.

(1) Chimneys were not always reported for houses having stove pipes extended through roof, wall, or window.
 (2) These figures cover paint on frame buildings and some woodwork of houses constructed of other materials.
 Occasionally a brick house was found painted.

(1) Chimneys were not always reported for houses having stovepipes extended through roof, wall, or window.
 (2) These figures cover paint on frame buildings and some woodwork of houses constructed of other materials.
 Occasionally a brick house was found painted.

Table III, Size of House

Counties	Single stories		Two stories		Bedrooms		Bathrooms		Basement	Average per house	Average per room
	One	More than one (7)	One	More than one (7)	Average per house surveyed	Average per house surveyed	% houses reporting	Average per house surveyed			
Albany	68.70	31.30	5.4	8.22	.26	2.5	62.60	1.36	22.02	20.42	5.9
Goshen	82.16	17.84	4.2	1.78	.03	1.9	47.88	.85	12.69	37.79	4.7
Laramie	64.68	35.32	5.1	5.22	.11	2.2	61.10	1.14	14.46	43.37	4.3
Summary 3 counties	75.23	24.77	4.6	3.76	.09	2.1	53.90	1.02	14.66	36.62	4.4
											.96

- (1) These figures cover paint on frame buildings and some woodwork of houses constructed of other materials. Occasionally a brick house was found painted.
- (2) One-story houses.
- (3) "More than one story" does not necessarily mean "two-story." Houses with lofts were included in this group.
- (4) See footnote on Table IV.

Table IV, Water Supply and Sewage Disposal

Counties	Water supplied to house			Indoor toilets		Bathroom fixtures (1)	Kitchen sink with drain	Septic tank (2)
	Hand pump in dwelling	Piped		Chemical	Flush			
		Cold	Hot			Tub	Lavatory	
Albany	23.08	16.98	13.26	1.33	9.02	16.45	12.53	43.24
Goshen	6.38	14.25	5.57	.07	4.53	6.53	5.64	20.86
Laramie	4.02	21.01	6.11	1.49	5.66	8.20	5.66	27.87
Summary								
3 counties	8.35	16.53	6.93	.67	5.55	8.56	6.89	25.35
								2.01

Table V, Light and Heat

Counties	Lighting				Central heating system		
	Gas		Electricity		Pipelless		Piped warm air, steam or water
	Acetylene	Piped (3)	Home plant	Power line			
Albany	4.24	-	11.41	9.02	1.86	2.98	
Goshen	3.19	.07	3.71	7.72	2.75	1.63	
Laramie	4.47	.75	8.79	3.58	4.47	2.55	
Summary							
3 counties	3.72	.25	6.35	6.76	3.09	2.25	

- (1) Some bathrooms listed in Table III have no fixed plumbing equipment.
 (2) Occupants sometimes confused septic tanks with cesspools.
 (3) Natural, manufactured, or compressed tank gas.

Table VI, Refrigeration, Cooking and Laundry Facilities

Counties	Refrigeration		Cooling stoves			Power washing machine
	Ice	Mechanical	Kerosene or gasoline	Gas (1)	Electric	
Albany	34.22	2.65	6.90	.80	2.65	28.91
Goshen	14.70	1.78	52.64	1.11	1.56	32.44
Laramie	4.92	1.04	50.22	2.98	.69	32.34
Summary						
3 counties	15.05	1.71	44.76	1.59	1.54	31.86

Table VII, Financing of Construction, Repairs and Improvements

Counties	Not interested in borrowing	Interested in borrowing	Reporting amount desired for loan	Average amount desired
Albany	30.50	46.42	44.83	\$591
Goshen	35.49	51.22	48.26	587
Laramie	57.38	26.97	23.85	456
Summary				
3 counties	40.83	43.67	40.88	\$566

(1) Natural, manufactured or compressed tank gas.
